Michael Gurian, whose national bestseller *The Wonder of Boys* presented a radical and enlightening view of parenting sons, now offers a groundbreaking approach to raising daughters. In *The Wonder of Girls*, Gurian, himself the father of two girls, provides crucial information for fully understanding the basic nature of girls: up-to-date scientific research on female biology, hormones, and brain development and how they shape girls' interests, behavior, and relationships. He also offers insight into a culture mired in competition between traditionalism and feminism and a new vision that provides for the equal status of girls and women yet acknowledges their nature as complex and distinct from men. He explains what is \"normal\" for girls each year from birth to age 20; what developmental needs girls face in each stage; how to communicate effectively with girls; and how to cope with developmental crises such as early sexuality, eating disorders, parental divorce, and more. With personal insights, practical tips, real-life anecdotes, and accessible science, *The Wonder of Girls* creates a new parenting paradigm. Key elements include: a nature-based approach to why girls are the way they are the connection between the need for profound attachment and the physical and brain development of girls support for a girl's inherent need for intimacy tools to protect girls' self-esteem and emotional life a new approach to girls' character development and rites of passage. With this scientifically based developmental map of girlhood, Gurian equips parents with a comprehensive guide for raising daughters. Challenging our culture to examine and embrace a crucial piece of the puzzle missing thus far, *The Wonder of Girls* elevates the dialogue on parenthood.

Mini Down Under traces the history of one of New Zealand's - and the world's - best-loved cars. More versions of the Mini were available in New Zealand than anywhere else, and the launching of the iconic car in February 1960 was a larger-than-life event. In this lively and personal story, the author tracks the Mini's life in New Zealand, the connection between Kiwi racing driver Bruce McLaren and the birth of the Mini Cooper, the heady days of competition success in the Antipodes, the local assembly and marketing of the classic original car and the eventual development into the latest generation Mini for a new century.

Then, Now, and Beyond is a book of essays by members of the MIT Class of 1964 written on the occasion of their 55th reunion. It is about how the world has changed since they entered MIT in 1960. The essays are a blend of history and biography written by those who led, participated, or observed the unfolding events in many disciplines, not just science and engineering. The essays cover 1960 through 2019, and for some a view of what the future might hold. The late fifties and sixties were times of significant change - social, cultural, and technological. We had the good fortune of being drawn together from many places, spending time together, and then being blasted out into the real world - to amass experiences and to evolve beliefs and views of what the world (big and small) might be like for our grandchildren. That's what this book is about. Lots of people before us have written about: the way things were, or the history of "X," of the future of "Y." What we capture in these essays is a sense of the people of our times, change as we saw it unfold and our belief as to its future impact. The essays are about hobbies, politics, culture, business, science and technology. "Then" is the late 50's early 60's. We took exams with your "slip stick" (slide rule) and often you could bring anything into an exam except another person. Telecommunications was often teletype and computer input was punched cards and paper tape. Computers were big and not very powerful - such as the IBM 709, 7090, 7094, TX-0, or PDP-1. You waited your turn for the main frame much as a supplicant to the gods. Then there was MIT Project MAC (Mathematics and Computation) which introduced timesharing. "Now" is well NOW. Computers abound - they wait on our wanting to use them and applications get written with stuff you don't need to prove you need an update and a faster machine. More power in a tiny device than existed in a room full in 1964. Wi-Fi antennas abound. The Internet has a lot of information including, old stuff about our undergraduate days, where we now live, what we do, meetings we go to, etc. etc. Would George Orwell, author of "1984," have recognized the "New privacy?" And "Beyond" is in the offing - much like what a landlubber sees when she stares toward the horizon and sees the ships going to far off places. It's where predictions of the future don't necessarily come true, but that is hardly a reason not to predict. Authors: Jim Allen, Bob Blumberg, Robert Colvin, Ron Gilman, Bob Gray, Conrad Grundlehner, Leon Kaatz, Jim Lerner, Paul Lubin, John Meriwether, Jim Monk, Lita Nelsen, Bob Popadic, David Saul, Tom Seay, David Sheena, Don Stewart, Bob Weggel, and Warren Wiscombe. Essay Topics Arts and Culture Then and Now - Did our world get better? Maybe yes. - David Sheena It Was Different Then - Especially for Women - Lita Nelsen Coeducation at MIT - Bob Gray Business How Technology Has Changed the Law - Ron Gilman Technology Comes to Shopping - Conrad Grundlehner Checks are Going Away and Have Been for a Long Time - Bob Popadic Science and Technology Moonshot - David Saul The Journey of an Aeronomer - John Meriwether Half a Century of Medicine - Robert Colvin Analog to Digital - Close Up View - Don Stewart From Pong to PCs - Jim Allen How Electronics Changed since Graduation - A Compression of Space and Time - Bob Blumberg From Aeronautics Student to Citizen Lobbyist - Jim Lerner Reflections on Energy - Jim Monk My Personal Odyssey in Climate Science - Warren Wiscombe Nuclear Deterrence and Satellite Communications - Thomas Seay My Many Years With Magnets - Bob Weggel The Evolution of Instant Photography - Paul Lubin Recreation Amateur Photography and Cinematography - Bob Popadic How Small Boat Coastal Navigation Has Changed - Bob Popadic Ice Climbing and Technology - Leon Kaatz

Can You Save The World? It's so easy to be overwhelmed by everything that is wrong in the world. In 2010, there were 660,000 deaths from malaria. Dire predictions about climate change suggest that sea levels could rise enough to submerge both Los Angeles and London by 2100. Bees are dying, not by the thousands but by the millions. But what can you do? You're just one person, right? The good news is that you *can* do something. It's called citizen science, and it's a way for ordinary people like you and me to do real, honest-to-goodness, help-answer-the-big-questions science. This book introduces you to a world in which it is possible to go on a wildlife survey in a national park, install software on your computer to search for a cure for cancer, have your smartphone log the sound pollution in your city, transcribe ancient Greek scrolls, or sift through the dirt from a site where a mastodon died 11,000 years ago—even if you never finished high school. Part I of *Be the Change: Saving the World with Citizen Science* will show you what citizen science is, how important it is, and why we need more of it. You will also find out how it can personally benefit you, how you can get involved, and what it might mean to you if you did. Part II provides a large list of projects that you can join right now, concisely explained, and organized by the level of involvement required. Citizen science is fun, it's easy, and you can get started today. *Be the Change: Saving the World with Citizen Science* will show you how. Show less
